Objective and Investment Policy

The Fund is an ETF UCITS passively managed. The investment objective of the Fund is to reflect both the upward and the downward evolution of MSCI Japan Net Total Return Index (net dividends reinvested) (the Benchmark Index) denominated in JPY, while minimizing the volatility of the difference between the return of the Fund and the return of the Benchmark Index (the "Tracking Error"). The anticipated level of tracking error in normal market conditions is indicated in the prospectus. Additional information about the Benchmark Index can be found at www.msci.com. The Fund seeks to achieve its objective via a direct replication, by investing primarily in the securities comprising the Benchmark Index. To optimize the Benchmark Index replication, the Fund may use a sampling replication strategy. The potential use of this technique is published on Amundi's website: www.amundiETF.com. Updated composition of the Fund holdings is available on www.amundiETF.com. MSCI's website (www.msci.com) contains more detailed information about the MSCI indexes. In addition, the indicative net asset value is published on the Reuters and Bloomberg pages of the Fund, and might also be mentioned on the websites of the stock exchanges where the Fund is listed.

Risk indicators (Source: Fund Admin)

	1 year	Inception to date *
Portfolio volatility *	16.22%	17.27%
Benchmark volatility	16.51%	17.43%
Sharpe ratio	2.02	1.57

* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year. The higher the volatility, the higher the risk.

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

⚠ The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

We have classified this product as 5 out of 7, which is a medium-high risk class. This rates the potential losses from future performance at a medium-high level, and poor market conditions will likely impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances. This product does not include any protection from future market performance so you could lose some or all of your investment. Beside the risks included in the risk indicator, other risks may affect the Sub-Fund's performance. Please refer to the MULTI UNITS LUXEMBOURG prospectus.
